Art Unit: 1655

DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-34, drawn to a method of screening for modulating agents.

Group II, claim(s) 35, 38-40, drawn to a method of preserving nerve bundles.

Group III, claim(s) 36-37, drawn to a method of modulating sensory perception.

Group IV, claim(s) 41-45, drawn to a method of treating a neurological disorder.

Group V, claim(s) 46-47, drawn to a method of inducing immunosuppression or treating inflammation.

Group VI, claim(s) 48-49, drawn to a method of treating hematological disorders.

Group VII, claim(s) 50-65, drawn to a method of diagnosing a homer signaling disorder.

Group VIII, claim(s) 66-71, drawn to a method of determining the efficacy of a inhibitor.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special

Application/Control Number: 10/518,941

Art Unit: 1655

technical features for the following reasons: what Groups I and II have in common is an agent identified by the method of claim 1, while what Groups I and Group VII have in common is contacting at least one protein/peptide with a Homer protein, thus, there is no special technical feature, and the Groups are not so linked as to form a single general inventive concept under PCT Rule 13.1., the application lacks unity of invention.

Election of Species

Page 3

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- A. The type of PPIase inhibitor from among those instantly claimed-i.e., FK506, cyclosporine A, GPI-1046-see, e.g., claim 9, 61.
- B. The type of endpoint assay from among those instantly claimed-see, e.g., claim 11.
- C. The type of recombinant protein or peptide from among those instantly claimed-see, e.g., claim 16.
- D. The type of protein or peptide from among those instantly claimed-see, e.g., claim 22, 65.
- E. The type of PPIase from among those instantly claimedsee, e.g., claim 24, 60.
- F. The type of Homer protein from among those instantly claimed-see, e.g., claim 28.
- G. The type of neurodisorders from among those instantly claimed-see, e.g., claim 32, 42-45, 59.

Application/Control Number: 10/518,941

Art Unit: 1655

H. The type of disorder from among those instantly claimed-see, e.g., claim 34, 47, 55.

I. The type of hematological disorder from among those instantly claimed-see, e.g., claim 49, 57.

Applicant is required, in reply to this action, to elect a single species from each type (i.e., for Group A-elect FK506, from among those instantly claimed such as recited in claim 9, 61; for Group B-elect a modulation of Ca⁺² signaling, from among those instantly claimed such as recited in claim 11;) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP \$ 809.02(a).

The following claim(s) are generic: 1, 46, 48, 50.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: what Groups I and II have in common is an agent identified by the method of claim 1, while what Groups I and Group VII have in common is

Application/Control Number: 10/518,941

Art Unit: 1655

contacting at least one protein/peptide with a Homer protein, thus, there is no special technical feature, and the species listed above do not relate to a single general inventive concept under PCT Rule 13.1.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1 .143).

Conclusion

Certain papers related to this application may be submitted to Art Unit 1636 by facsimile transmission. The faxing of such papers must conform with the notices published in the Official Gazette, 1156 OG 61 (November 16, 1993) and 1157 OG 94 (December 28, 1993) (see 37 C.F.R. § 1.6(d)). The official fax telephone number for the Group is 571-273-8300. NOTE: If Applicant does submit a paper by fax, the original signed copy should be retained by applicant or applicant's representative. NO DUPLICATE COPIES SHOULD BE SUBMITTED so as to avoid the processing of duplicate papers in the Office.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-

Art Unit: 1655

9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.

For all other customer support, please call the USPTO Call Center (UCC) at 800-786-9199.

Any inquiry concerning rejections or objections in this communication or earlier communications from the examiner should be directed to Bin Shen, Ph.D., whose telephone number is (571) 272-9040. The examiner can normally be reached on Monday through Friday, from about 9:00 AM to about 5:30 PM. A phone message left at this number will be responded to as soon as possible (i.e., shortly after the examiner returns to her office).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dr. Terry McKelvey can be reached at (571) 272-0775.
